Re: San Elijo Elementary School Modernization and Road Widening

Dear Mike,

I wanted to thank Geogrid for the outstanding job on the San Elijo Elementary School project in San Marcos, CA. The project consisted of a parking lot expansion and road widening requiring almost 22,000 square feet of keystone retaining wall with an extremely aggressive design and construction schedule.

You were involved from day one designing the most efficient, economical, and eye-catching wall solution. We appreciated the assistance to reduce cost and you coordinated well with the Civil Engineer to expedite the design and address DSA comments – which were minimal.

As you know, the construction schedule was unlike any other, requiring the hefty expansion to be complete during a shortened summer break. Geogrid set the groundwork for the schedule, overcame numerous obstacles, and had the ultimate “can do” attitude. Your team stopped at nothing, and took responsibility to work overtime as necessary to make way for other trades to advance their work.

Your philosophy is right in line with Lusardi’s, as you have the “Do whatever it takes attitude.” I would greatly appreciate working with you again, knowing that when Geogrid says they’re going to do something, they will.

There were many skeptics on this project as the parents, faculty, and City members were questioning if we’d complete the work before the students returned. Ultimately, we successfully finished on time and everyone was ecstatic.

Great Job, and thanks again! There is no way we could have pulled this off without you!

Sincerely,

Nick R. Novak
