Subject: Sorrento Heights Geogrid / Soil Nail Wall Construction

Dear Mike,

The construction of the Geogrid and Soil Nail walls at Sorrento Heights was quite a learning experience for me. They were my first exposure to this type of construction and also the first opportunity I have had to work with Geogrid.

The project proved to have its own unique challenges and I would like to compliment you on Geogrid's performance. I learned quite a bit through observing the difficulties of drilling the stadium conglomerate material. It was also a great learning opportunity to watch the construction process of building a wall from the top down and finishing it off from the bottom up. I would also like to add that I was quite impressed at how quickly the Geogrid wall was built once your crew caught its stride.

On another note, your Foreman, Scott Borgas was informative, always ready to accommodate requests, and proactive in making safety corrections as the jobsite evolved. Scott also maintained a very professional and positive attitude regardless of the challenges he and his crew faced throughout the project. He was also cooperative with the grading contractor and did a nice job cleaning up the worksite when his work was finished. He should be commended for his professional demeanor.

Overall, I had a very good experience on this project and I look forward to working with Geogrid in the future.

Sincerely,

Chris Nichols
Off-Site Superintendent
